

cleaning & hygiene

dosing and cleaning systems overview

seko has always succeeded in combining ongoing technological innovation with the customary reliability of its products to develop internationally avant-garde systems for the industrial cleaning market.

Dosing systems for industrial dishwashers, laundry machines and dilution stations for concentrated chemical cleaning products for different types of surface are only an example of development based on specific market and customer requirements.

Kitchen

Our ranges of systems for dishwashers are developed abreast of the requirements of the sector, offering products that meet even the most sophisticated specifications.

Individual peristaltic pumps, integrated systems and microprocessor systems combine user-friendliness with reliability and safety in the automatic dosing of detergent and rinse aid products in any type of dishwasher, from the smallest fixed-cycle model to the largest tunnel-type.

Drain Control : These systems through dosing of bacteria or enzymes, are perfectly designed for the application where metabolizing of substances in waste water from kitchen or similar is required. A wide choice of systems with digital/analogue, weekly/daily programming options is available.

Laundry

The mechanical and plumbing efficiency of our peristaltic pumps, along with advanced electronic research, has made it possible for our company to create a wide range of products for the industrial laundry machine sector, controlling all kinds of automatized dosing operations.

The systems proposed offer versions featuring up to 7 pumps with long-life motors ensuring very broad capacity ranges.

In the more advanced systems programming can be carried out without having to link up to the main unit and it is possible to control many washing programmes and consumption statistics, even via PC.

In addition, all systems are equipped with end of product controls and alarms.

Surface Cleaning and Disinfection

When it comes to the washing, cleaning and disinfecting of various surfaces SEKO offers spray products for dilution with Venturi systems capable of meeting the various needs of the food industry and all areas to be sanitized in general.

Chemical Dilution and Proportioning Dispensers: A variety of Venturi systems has been designed for this sector; when these systems are connected to the water mains, they simply and quickly prepare any kind of chemical solution for use in standard cleaning operations.

There are many models available with different flow rates, pre-fitted for both small spray bottles and large containers. All systems are designed to prevent the backflow of chemical products into the mains system, thus preventing contamination.

Our complete range

Kitchen

■ Glasswashers

- Peristaltic dosing pumps
- Solenoid dosing pumps

■ Hood type dishwashers

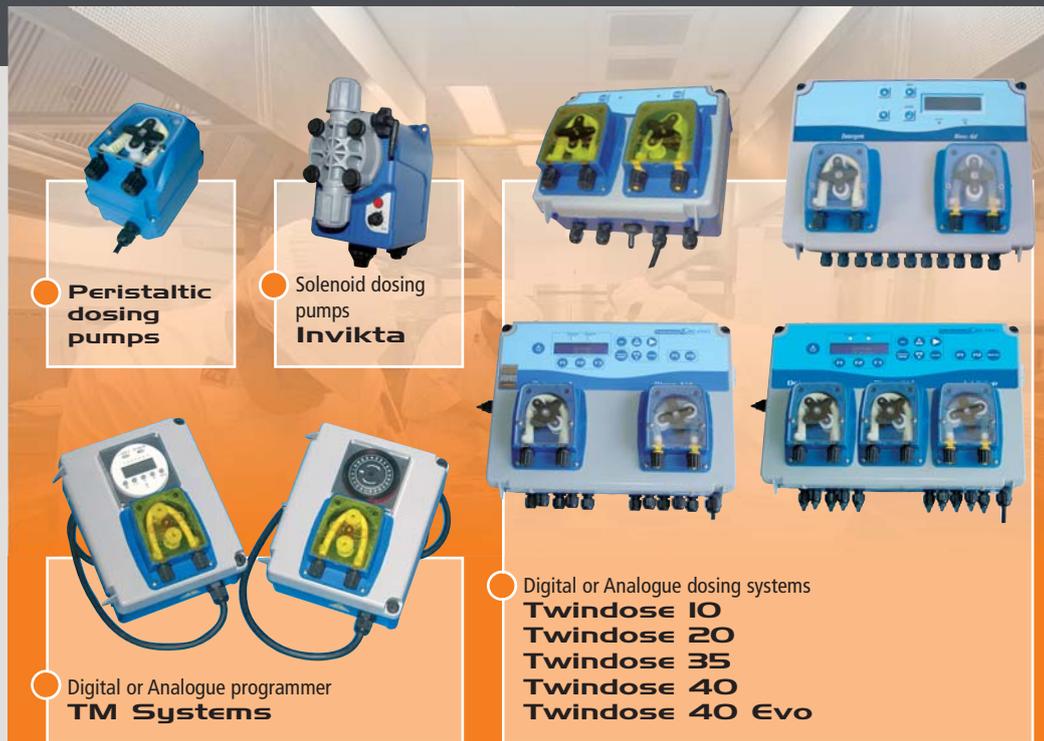

- Peristaltic dosing pumps
- Dosing systems
- Solenoid dosing pumps

■ Conveyor dishwashers

- Peristaltic dosing pumps
- Dosing systems
- Solenoid dosing pumps

■ Drain Control

- Digital or Analogue programmer

Laundry

■ OPL machines

- Peristaltic dosing pumps
- Single or double dosing systems

■ Commercial machines

- Double dosing systems
- Triple and more dosing systems

■ Industrial machines

- Double dosing systems
- Triple and more dosing systems

■ Tunnel machines

- Dosing systems
- Solenoid dosing pumps
- Mechanical diaphragm metering pumps

■ Multi-washer machines

- Centralised peristaltic multi-washer system
- Decentralised pneumatic multi-washer system
- Multi-tunnel system with PLC
- Relay systems for tunnel

Surface cleaning and disinfection

■ Dilution

Hand pump

Dilution system

■ Cleaning and disinfection

Spraying system

■ Foaming

Foaming system

■ Spraying

Automotive spraying system

■ Refill

Chemical dispensing system

seko has been a significant manufacturer of metering pumps and dosing systems for over 40 years. This long activity allowed **seko** to acquire a vast experience in diversified applications and to confirm its international success in many industrial fields through the supply of reliable solutions for the dosing, injection and transfer of liquids

Today **seko** is an International Group, developing, manufacturing and delivering its products in more than 50 countries, through its 15 subsidiaries and an extended network of distributors, agents and authorized dealers
